

SADGURU SANKALP NETRA CHIKITSALAYA

Patient Name	Nonitram Kushwaha
Father's Name	Surat Singh
Age/Sex	50 yrs/M
Address	Village – Gatera, Block Ganjbasoda, Dist. Vidisha M.P.
MR No.	F196084
Diagnosis	Cataract RE
Pre. Op. Vision	PLPR
Date of Identification	15/08/2014
Date of Surgery	16/08/2014
Operated at	SSNC, Anandpur

A 50 yrs male with a complaint of almost no vision at all since last 6 months visited the monthly camp at Ganjbasoda Vision Center. Mr. NonitramKushwahahas been at SSNC before for the surgery of his left eye which was performed on 14/7/2013. The earlier surgery for the Cataract LE was successful and his vision was restored to 6/9 (6/6 with Pin Hole). He was diagnosed as a case of Cataract RE.

After preliminary examination at the camp site he along with the other patients was escorted to the base hospital where after further examinations and vital investigations he was posted for surgery the next morning.

Mr. Nonitram is a daily stone cutter laborer with a daily income of Rs. 130/-. The availability of work is also a problem for him. He lives in small mud house with 2 rooms in village Gatera with his wife, four sons, two daughters and one daughter in law. The married son is only shouldering the economic burden along with him. The other three sons are doing nothing at all. For such a large family with a limited income has made his life miserable. The inability to see since last 6 months has even complicated the problem to a severe stage. With such a low income and large family size it was impossible for him to avail private facilities in nearby cities.

Since he was successfully operated earlier hence he due to faith in the services provided by SSNC and Shri Sadguru Seva Sangh Trust again visited the camp about which he was informed through vision center where he first went for eye check up. Also the publicity announcement which was made before the camp motivated him further to attend the camp on 15/8/2014.

Initial anxiety was something which was missing in him which differentiates him from all the other patients and the confidence in him was all due to firm belief in the quality services tailored with human touch which he has witnessed before when he was operated for the Left Eye.

Nonitram had a pre-op visual acuity PLPR in RE and 6/9 (6/6 with pin hole) in LE. After preliminary examination at the base hospital he was posted for Intra-Ocular Cataract surgery for the Right Eye. The next morning he was operated successfully and showed an excellent recovery. He had a visual acuity 6/18 (6/9 with pin hole) on the first day after surgery which will improve gradually. His faith was restored as it is the second time he has experienced such a feeling from no vision to almost a perfect vision. He marched out confidently along with the other patients with a huge smile and a sense of gratitude towards the hospital.
