

## SADGURU NETRA CHIKITSALAYA

### CASE STUDY –SHASHI SINGH

Pre-operative

Even when vision problems are just one part of a complex health condition, ophthalmology in children is part of helping kids reach their full potential. Shashi Singh, a 10 year old is staying with her family at Kannauj, Uttar Pradesh. She is suffering from Developmental Bilateral Cataract. Her vision was getting blurred gradually and this loss was not marked by her

Post-operative

She is a school going child studying in class 5<sup>th</sup>. Her brother and sister are the students of the same school. Previously she was taking keen interest in academic activities like sports, arts and craft and she was supposed to be a bright student in her class, but gradually she started losing her interest in any of the activities due to loss of vision.

Now her teachers and parents were bothered about her as she had to take help of her class mates to complete her study work. Her father is a Farmer and labour by profession and his earnings are less. When he came to know about vision disorders of her child, he got worried about treatment as he thought of too much expense on surgery. He was counseled by his uncle to go to Sadguru Netra Chikitsalaya at Chitrakoot for treatment.

He got her daughter at SNC for Surgical Intervention on 27<sup>th</sup> Nov, 2013. Now he and Shashi are happy as she could now see well. Her dark life has changed into bright one. Now he'll come back for follow up after 1 month and will get her daughter's other eye operated.

**“The way is available but we have to find it”, thanks to my uncle and Sadguru Netra Chikitsalaya who have showed me the way, now my daughter could see, Thanks- Said Devendra Singh (father of Seema)**
