

Case story

Arjun, a 05 years old boy, is residing in Ramnath Ashram Shala School located in Nayagaon, Majhgawan, Satna district. He is studying in 01st standard in the same ashram school. Arjun parents belong to tribal region residing in Majhgawan jungle. His father is a labourer and her mother is a housewife. Arjun has two more siblings.

During the discussion with the Ashram care taker, he informed that the parents of Arjun have left him in the ashram for his studies and other socio-economic needs, as they were not able to take care of Arjun at their home due to poverty. As per the ashram policy, before accepting a child, they need to examine each and every detail about the child by visiting their native home. When the ashram personnel visited at his place, they found that the family was extremely poor and looking into the abilities of Arjun, they brought him to their Ashram. The Ashram care taker informed that during the eyes screening being done at their Ashram school by the team of Sadguru Netra Chikitsalaya, Arjun was referred to Chitrakoot hospital with a referral card.

On examining the eye of the child at the base hospital, he was diagnosed Nystagmus in both eyes and a history of Invaluntary movement since birth advised and was advised to wear spectacles along with low vision exercise. As it was not possible with Arjun to visit daily for the exercise, the doctors explained the tricks to perform the exercise at his ashram only.
