Post Op Vision: RE: 6/18, LE: 6/36

Komal: Pre-Op Vision:

Post op Vision:

Address: Khakhredu, Khaga, Fatehpur (U.P)

Anita Devi (13) and Komal (3) are two minors which belongs to the same family from a small village called Khakhredu near Fatehpur (U.P) and suffering from congenital bilateral cataract by birth. They got treated in Paediatric unit of SNC and now they both are able to see the whole world without any help.

The whole family was worried about this troublesome problem for the girls sake with respect to marriage and future liability and they are financially unstable and work upon wages and the entire family depends on the primary earner i.e., Father.

Fortunately, Fatehpur free eye camp was organized on behalf of SNC, and the volunteers pushed the family to undergo the cataract surgeries for their daughters. They got convinced and were sent to hospital for the same. After the surgery, now both the sisters can see and are living a happy healthy independent life. Previously due to blindness, they had to quit their studies but now they can get the desired education.

The whole SNC staff was very happy to see the drastic change in both the girls life and their parents were greatly thankful to SNC for giving them a new life and insight.
